Wazuh Dashboard Exploration Report

Task

Wazuh Installation and Initial SOC Platform Exploration

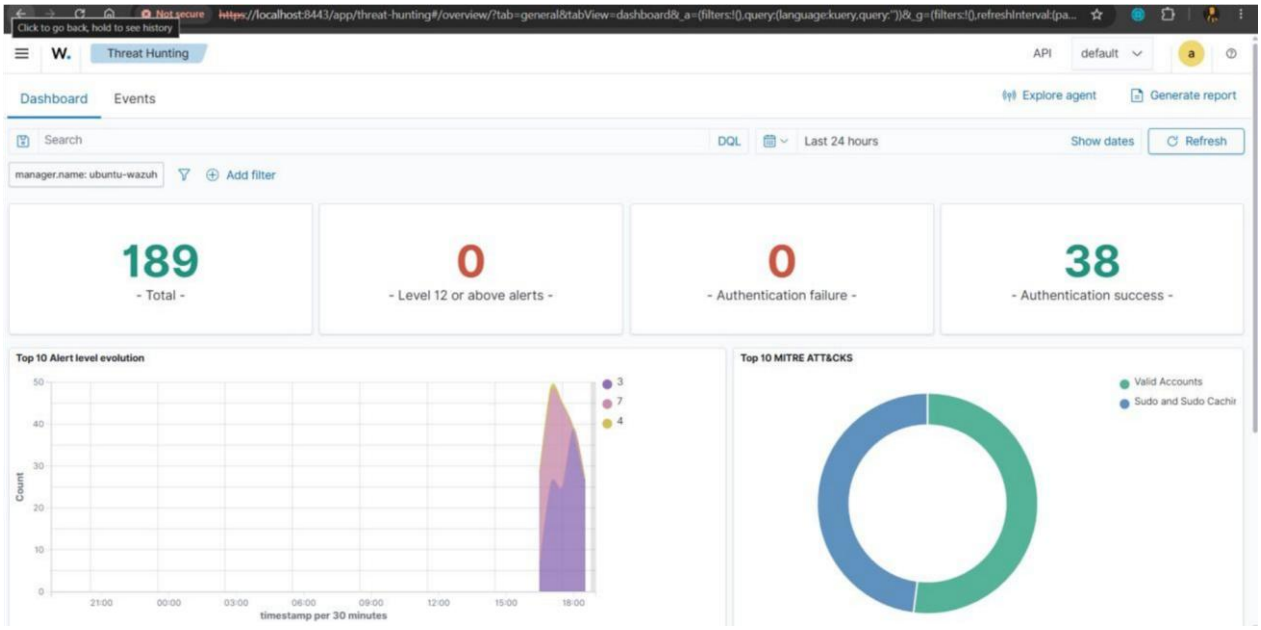

Objective

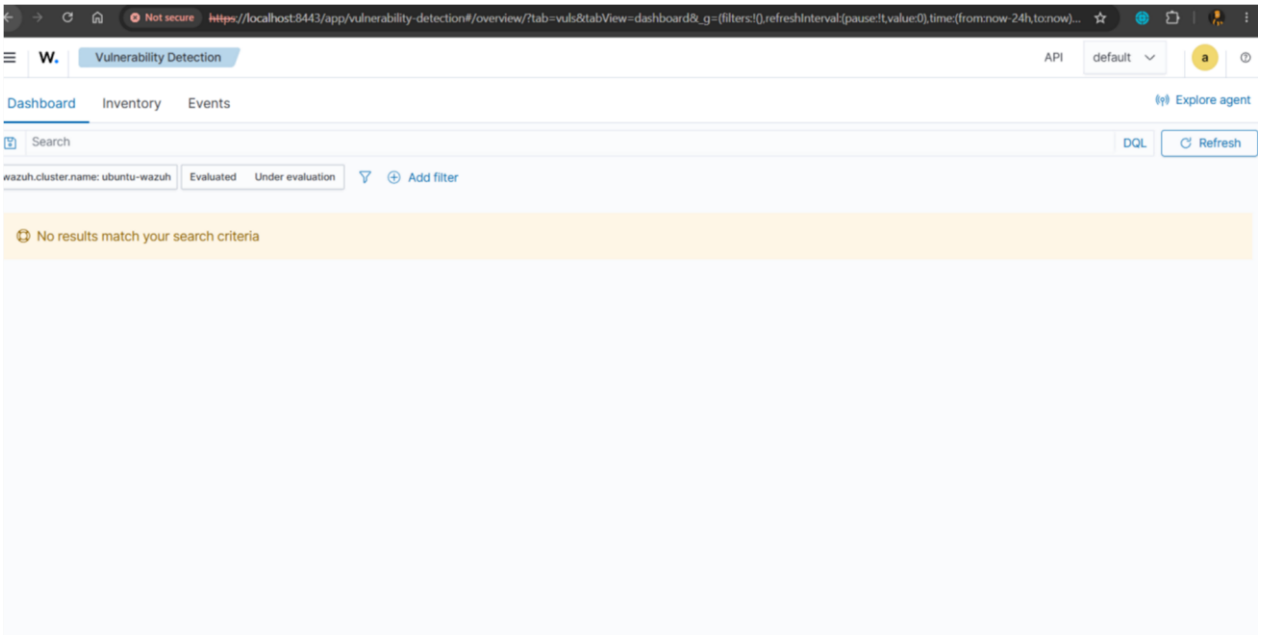

The aim was to log in to Wazuh and explore its main dashboard sections.

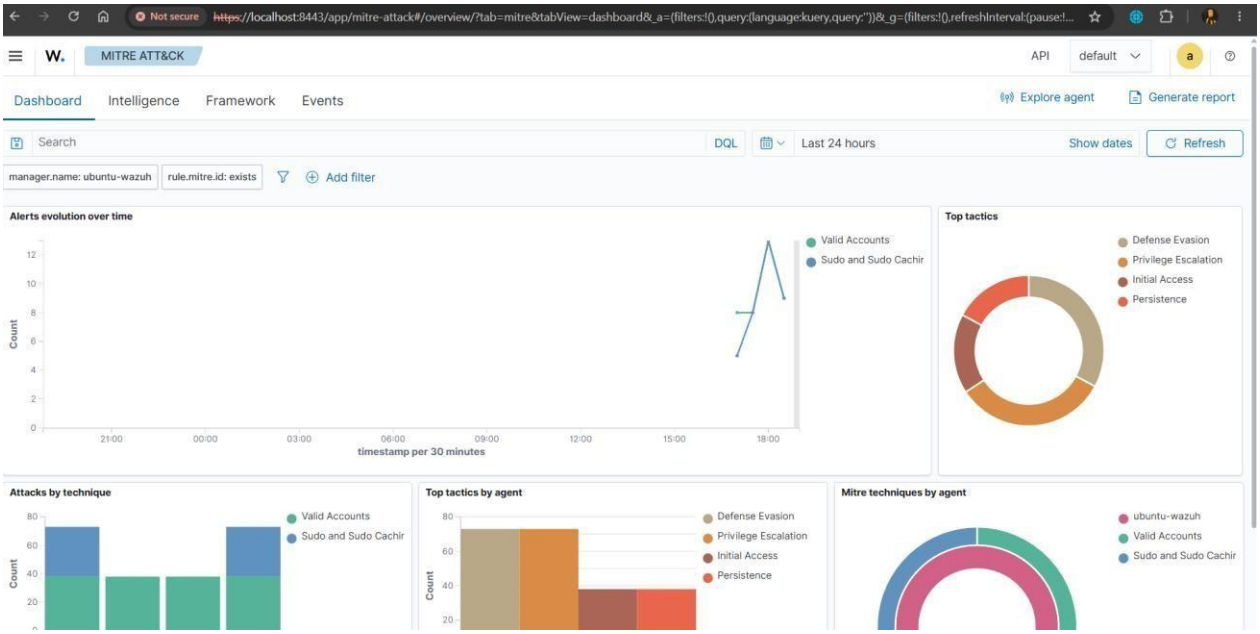

System Details

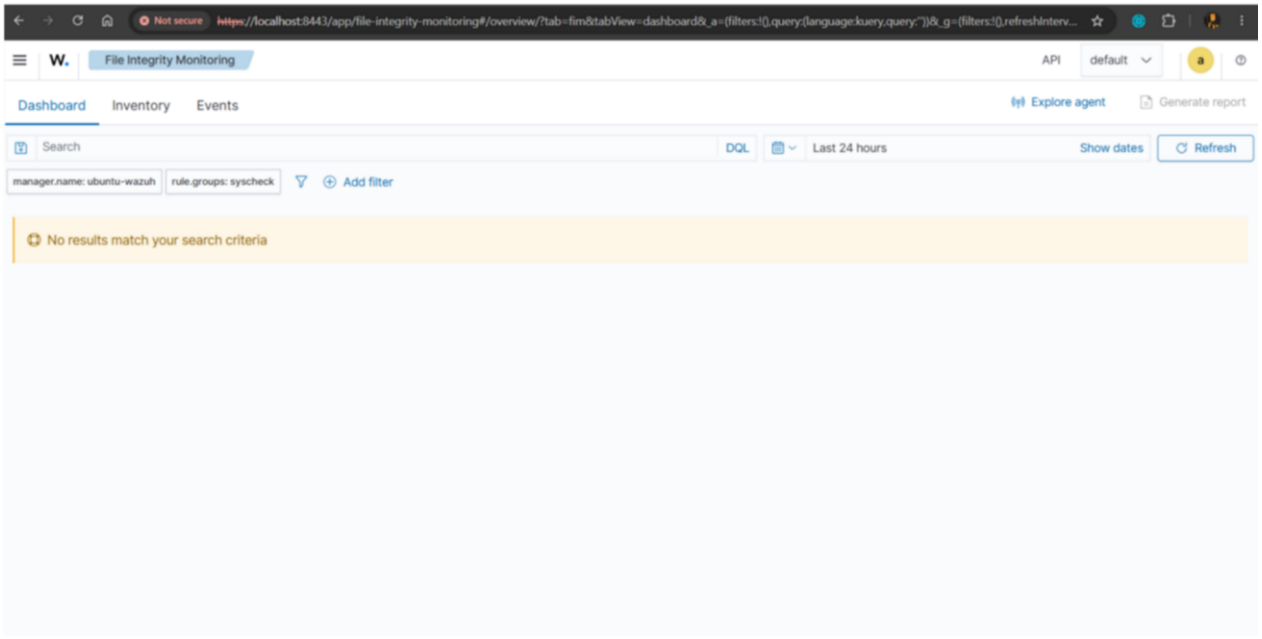

Wazuh 4.14.8 running on Ubuntu Server 26.04.1 LTS in VirtualBox. The dashboard was opened in a browser using the local address https://localhost:8443.

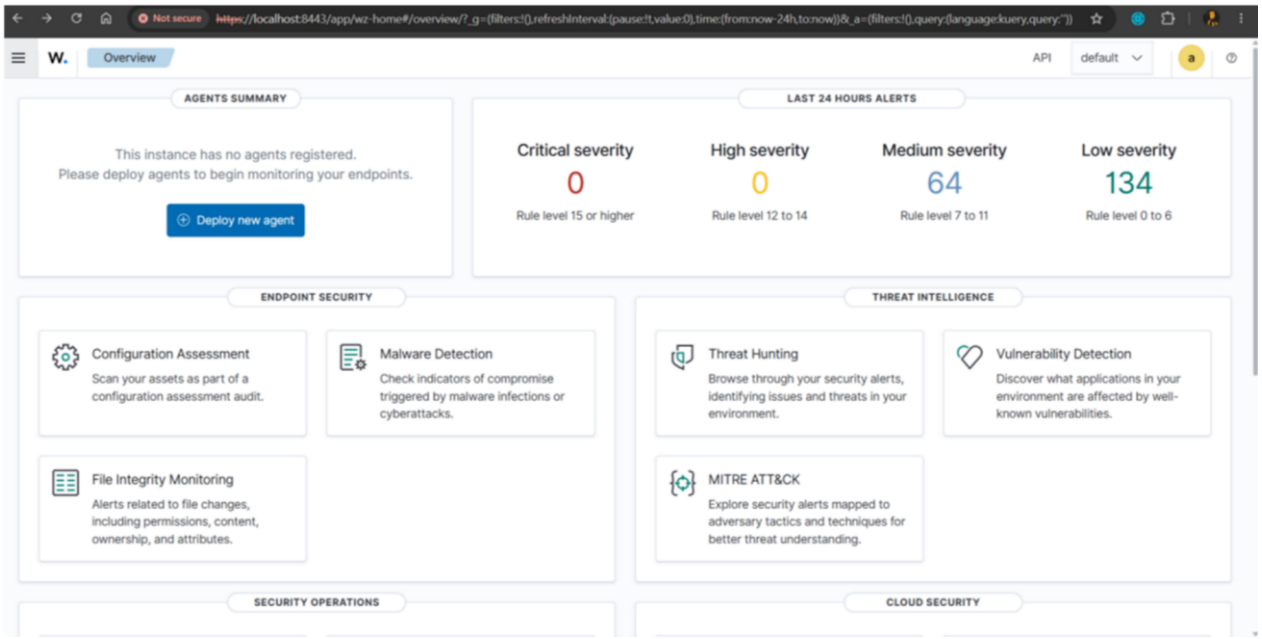

I Explored allDashboard Sections

ENDPOINT SECURITY
Configuration Assessment
Scan your assets as part of a configuration assessment audit.
Malware Detection
Check indicators of compromise triggered by malware infections or cyberattacks.
File Integrity Monitoring
Alerts related to file changes, including permissions, content, ownership, and attributes.
THREAT INTELLIGENCE
Threat Hunting
Browse through your security alerts, identifying issues and threats in your environment.
Vulnerability Detection
Discover what applications in your environment are affected by well-known vulnerabilities.
MITRE ATT&CK
Explore security alerts mapped to adversary tactics and techniques for better threat understanding.
SECURITY OPERATIONS
CLOUD SECURITY

```

Initial Checks

- The user reported that wazuh-manager, wazuh-indexer, and wazuh-dashboard were active.
- Check the actual agent list and indexer health output before submitting, and add screenshots if available.
- Use only the rules and decoder files that were actually shown in your terminal.

Security Alerts

The task asks for three real alerts. Add their rule ID, description, severity, time, source IP, and agent name if shown. If you did not find three alerts, explain that honestly. Do not make up alert details.

Conclusion

I explored the main Wazuh dashboard sections and recorded the results that were visible. Some pages could not show agent-based information because no agent was installed. More event details would be needed to complete a full alert analysis.
