Wazuh Installation Report

Task

Wazuh Installation and Initial SOC Platform Exploration

Objective

The aim of this task was to install Ubuntu Server, set up Wazuh, and check that it was working.

Work Completed

- Created an Ubuntu Server virtual machine in VirtualBox.
- Installed Ubuntu Server and checked the internet connection.
- Downloaded and ran the Wazuh installation script.
- Set up access to the Wazuh dashboard through the browser.
- Logged in to the Wazuh dashboard.
- Checked the main services. All three services were reported as active.

Problem During Installation

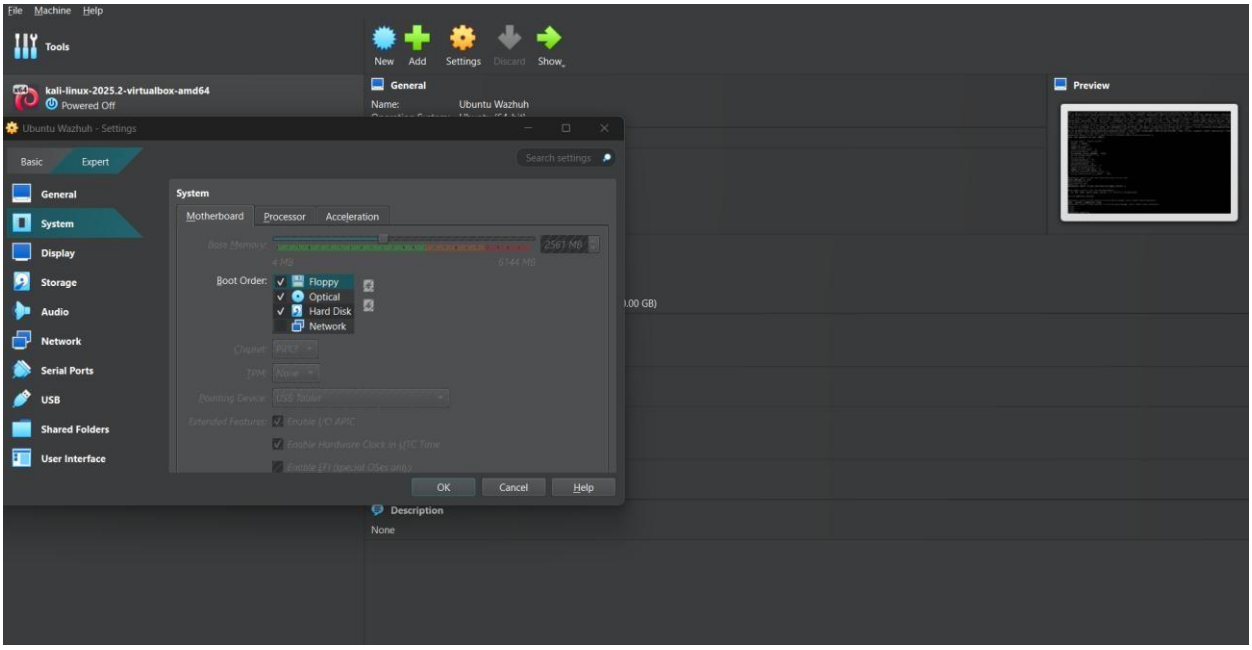

The first installation attempt failed because there was not enough free disk space while installing the dashboard. I worked through the issue and later got Wazuh running. The dashboard opened successfully, and all three main services were reported as active.

Conclusion

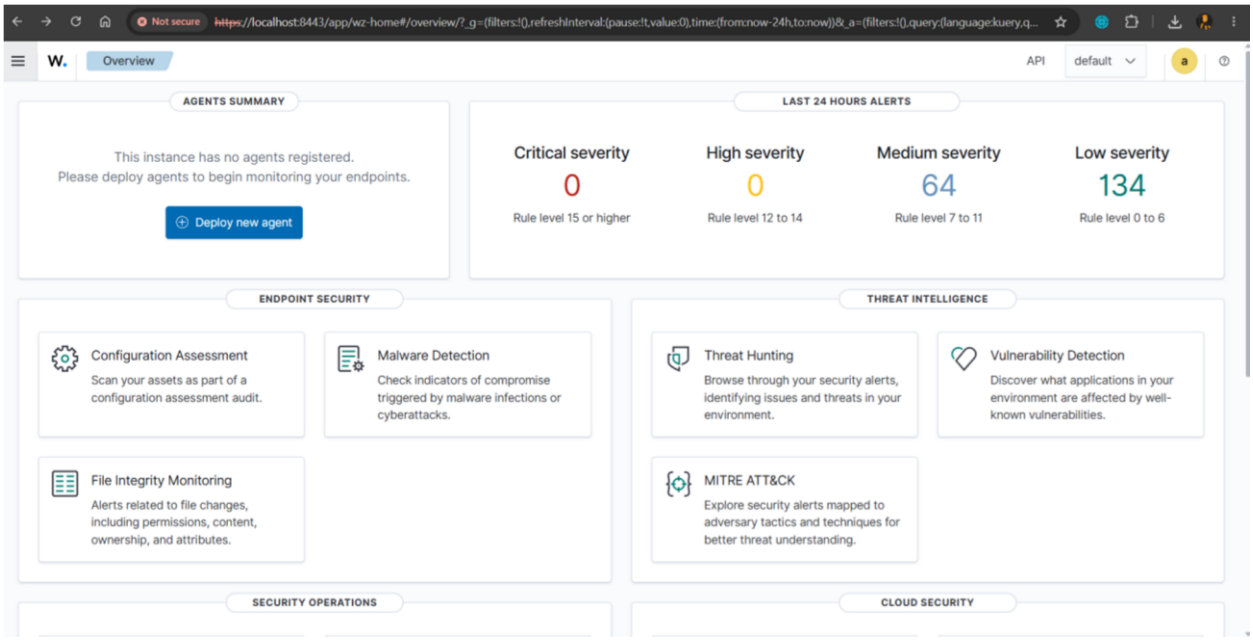

Ubuntu Server and Wazuh were set up successfully for initial lab exploration. The Wazuh dashboard was opened and the main services were checked.

Screenshots to Attach

Attach the screenshots you actually saved, such as the Ubuntu setup, internet check, service status, Wazuh version, and dashb oard. Include the installation error screenshot if you have it.
